Maximise value using continuous processing

## CashFlowid

When considering the implementation of a continuous process it is key to have a detailed understanding about the economic benefits and consequences. Despite uncertainties, investments and risks need to be identified and justified in advance. For this, Flowid offers: CashFlowid.

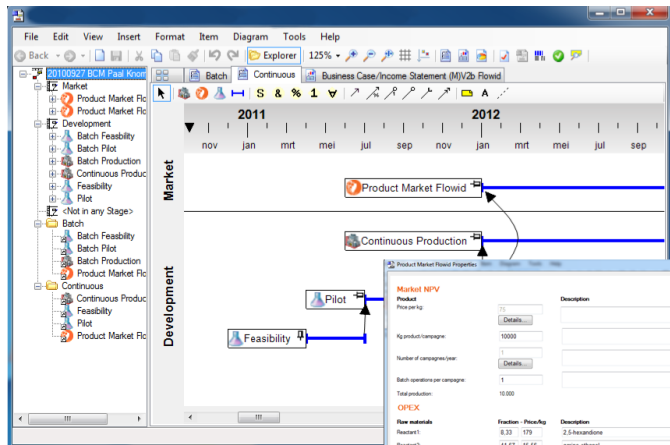

**CashFlowid is an expert service using proprietary software to simulate the economic performance of a continuous process benchmarked to its conventional counterpart.**

CashFlowid knows how to cope with difficult questions:

*What does the development path look like?*

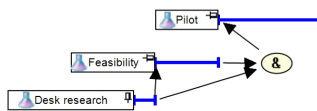

*What are success rates? Which choices can be made accordingly?*

*What investments and costs are involved in both the development and operational phase?*

Screenshot of CashFlowid

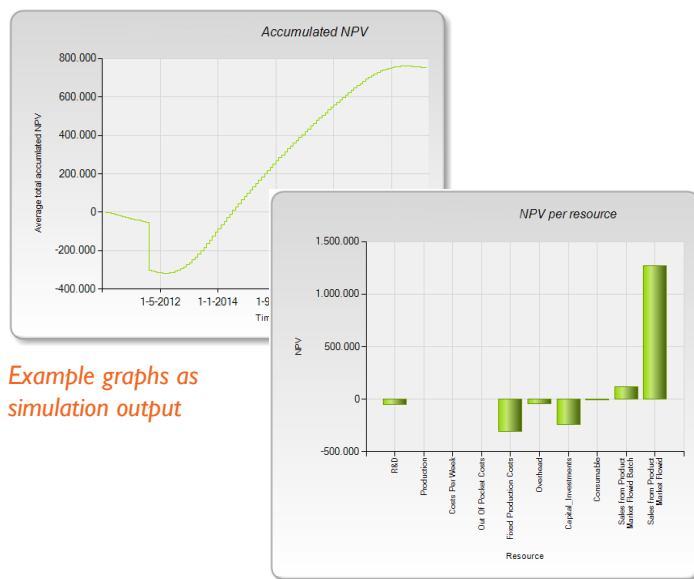

Spreadsheets prove to be inadequate for the generation of sophisticated business cases. Therefore, Flowid developed its proprietary economic simulation software that is able to generate a thorough business case.

Simulated activities are started based on conditional choices

## How it works

During a workshop each development and commercialisation activity is visualised on a time line. To each activity, several characteristics like costs, employees, production time and success rates are added. Furthermore, activities can be started based on conditional choices to simulate real life decision processes. Also a benchmark to the current situation can easily be made.

Example graphs as simulation output

The output is provided in the form of a report giving a clear overview on the Net Present Value (NPV), risk spread, cash flows, CAPEX and OPEX. All illustrated by both graphs and figures.

**CashFlowid provides a way to manage risks and opportunities to make process intensification a success!**

## Offer

Flowid offers an intake, a three hour on site workshop to gather the required information, a presentation and a final report. For more information please contact Flowid.

Flowid is an engineering firm specialised in production scale implementation of continuous flow chemistry. In the field of chemical technology Flowid has been awarded several times for its innovative and groundbreaking work.

Leading companies like Alfa Laval, Bronkhorst, Fuji Techno, FutureChemistry, IMM, KSB, MicroNit and Mikroglas choose to cooperate with Flowid. For more information please visit [www.flowid.nl](http://www.flowid.nl)
